Summary

Backend-Specialized Full-Stack Developer with extensive experience in designing and building scalable systems using **GoLang, Ruby on Rails, and Python**. While my primary expertise lies in backend architecture, I possess solid capabilities in **Artificial Intelligence (AI), Generative AI**, and **ReactJS**, enabling me to build intelligent, automated Agentic workflows and contribute effectively across the entire development stack.

Technical Skills

Languages:	Golang, Python, Ruby, SQL, JavaScript, TypeScript
AI & Automation:	Artificial Intelligence (AI), Generative AI, LLMs, CrewAI, LangChain, LangGraph
Frameworks:	Ruby on Rails, FastAPI, ReactJS
Tools & Platforms:	AWS, Docker, Kubernetes, Prometheus, Grafana, GitHub Actions
Concepts:	Agentic AI Workflows, GraphQL, REST APIs, Microservices, CI/CD, System Design

Professional Experience

Samsung Research Institute, Bangalore

Lead Engineer (Samsung Ads)

Jan 2025 - Present

- Engineered an **Artificial Intelligence (AI)** automation system (**Plan Assist**) utilizing **Generative AI** and **Large Language Models (LLMs)** with **CrewAI, LangChain, LangGraph, and Python FastAPI** to autonomously process 500+ monthly client RFPs into actionable media plans with budget and impression forecasts.
- Reduced RFP processing time by **77%** (from 45 minutes to 10 minutes per request) by automating complex operational form population, saving the operations team **~290 hours monthly**.
- Led a critical geo-data migration to Digital Element and architected a new **postal code targeting** feature, guiding it from technical scoping and Architecture Review Board (ARB) approval to full production release, securing **~\$10M** in at-risk campaign revenue.

Software Engineer (Samsung Ads)

Aug 2022 - Dec 2024

- Designed and developed an **Authorization Service** from scratch in Go, handling **200+ requests per second** with **p99 latency of 20ms**, ensuring fast and reliable access control.
- Integrated **Prometheus metrics** into Samsung DSP application and built **Grafana dashboards** (latency, error rate, performance) using PromQL to enhance observability and enable proactive monitoring.
- Developed and optimized **CI/CD pipelines** using GitHub Actions for Authorization Service and Samsung DSP, integrating linters, image builds, deployments, unit tests, and integration tests to streamline release cycles.
- Enhanced advertisement campaign pacing by introducing custom date-based budget allocation, expanding beyond standard pacing modes, helping onboard **10+ new clients** and enabling differentiated sales offerings.
- Executed multiple migration and maintenance tasks for Samsung DSP, including transitioning third-party integrations and ensuring seamless system functionality.

Education

Maharaja Agrasen Institute of Technology, Delhi

Aug 2018 - Aug 2022

B.Tech in Computer Science | CGPA: 9.29/10

- Relevant Coursework:** Object Oriented Programming, Operating Systems, Database Management System, Data Structures, Algorithm Design And Analysis, Web Engineering, Computer Networks, Java Programming.

Kendriya Vidyalaya, Delhi

Graduated: April 2018

Class 12th PCM with Computer Science | Percentage: 93.8%

Leadership & Initiatives

- Initiated and organized an Engineering Jam Session at Samsung Research Institute, fostering a culture of knowledge sharing across teams.
- Conducted several training sessions for a broad audience on code.i, Samsung's internal coding assistant, and delivered a presentation on building an SQL agent using Snowflake Cortex with database connectivity.
- Successfully managed two projects with a team of two members, ensuring comprehensive work scoping and timely delivery without any production issues.
